DETAILED ACTION

Allowable Subject Matter

Claim 11-20 and 29 are allowed.

The following is an examiner's statement of reasons for allowance: Regarding claims 11-20 and 29.

Regarding claims 11-20 and 29, Baek teaches a transfective liquid crystal display device implementing a color filter having various thicknesses comprising: a lower substrate, a lower electrode wherein the lower electrode has a transmission portion and reflective portion An upper substrate opposing the lower substrate, wherein a side of the upper substrate has a color filter having a first thickness portion and a second thickness portion, the first thickness portion is thicker than the second thickness portion and the first thickness portion corresponds to the transmissive portion and the second thickness portion corresponds to the reflective portion. Baek neglects to teach a planarization layer formed on color filters that had a first thickness. Kim teaches that it would have been obvious to one of ordinary skill in the art to place a protective insulating layer over the color filters (see previous rejection) however there lacks no motivation to pattern it such that the it has a transmissive portion thinner than the reflective portion.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
